Experience

ION GROUP | DevOps Engineer

Mar 2023 – Mar 2026 | Pisa, Italy

- Engineered an on-premise PaaS solution on Kubernetes for banking clients, managing networking, monitoring, DNS, certificates, and deployment strategies.
- Managed and automated on-premise Kubernetes clusters with Rancher as the upstream solution and RKE2, using Ansible to provision infrastructure and Terraform to drive deployment pipelines.
- Designed and developed a cookie-based customized HAProxy load balancer with sharding in a Kubernetes environment, enhancing the application scalability.
- Orchestrated end-to-end Kubernetes deployments using ArgoCD with Helm chart wrappers, standardizing releases, and accelerating delivery across environments.
- Architected and deployed a highly available MS SQL Server cluster on AWS, reducing infrastructure costs. Streamlined deployment with IaC for efficiency.
- Managed logging in a Kubernetes environment using the Logging Operator and OpenSearch, implementing complex indexing, log retention policies, and structured analysis for improved observability and troubleshooting.
- Contributed to the development of a Kubernetes operator using Quarkus and Java to manage a complex and stateful platform for resource orchestration.

NATIONAL RESEARCH COUNCIL OF ITALY | Research Assistant Intern

Feb 2022 – Dec 2022 | Pisa, Italy

- Designed and implemented a hybrid Recommender System combining graph-based techniques and LLMs to recommend scientific artifacts.

PART SOFTWARE GROUP | iOS Developer

Jan 2020 – Jun 2020 | Mashhad, Iran

- Contributed to the development of an application that delivers real-time trading market data, improving data visualization and user interaction.

SILVER AGE | iOS Developer Intern

Jul 2019 – Jan 2019 | Mashhad, Iran

- Contributed to the development of a credit shopping application by implementing notifications with Firebase and integrating API calls to improve functionality.

Projects

LAM CHAT | Erlang, Java

Github

- A distributed chat platform with a fault-tolerant server using Java and Erlang.

CEPH-BASED FILE MANAGER | Python

Github

- A distributed cloud storage file-manager based on Ceph.

AIR POLLUTION MONITORING SYSTEM | C, Python

Github

- A Monitoring System to program the simulated sensors with CoAP and MQTT Protocols for efficient data transmission, enabling real-time monitoring.

Skills

PROGRAMMING

Java • Python • Go • Bash

INFRASTRUCTURE

Kubernetes • Docker • Helm • Terraform • Ansible • Amazon EKS • Amazon EC2

CI/CD

Git • Azure Pipelines • ArgoCD

MONITORING

Prometheus • Grafana • OpenSearch

Education

UNIVERSITY OF PISA

Master's in Artificial Intelligence and Data Engineering

Feb 2023 | Pisa, Italy

FERDOWSI UNIVERSITY OF MASHHAD

Bachelor's in Computer Engineering

Sep 2019 | Mashhad, Iran

Certifications

Certified Kubernetes Administrator (CKA) The Linux Foundation, 2026.

Certified Kubernetes Application Developer (CKAD) The Linux Foundation, 2025.

Publications

Virtual research environments ethnography: A preliminary study. IWSG, 2022.

Recommender Systems for Science: A Basic Taxonomy. IRCDL, 2022.
